Made in China
Before Using Product

Read and follow all instructions carefully to ensure that your gate and extensions are properly installed. Improper installation could result in the gate becoming unstable or dislodged from the doorway. Always make sure the extension is securely attached to the gate before using. The safety of your child is your responsibility. Please keep these instructions for your reference.

IMPORTANT

• If using this gate at the top of stairs, the four wall cups MUST be used. If not used, the gate may become dislodged from the opening.
• Never use more than two extensions per side of gate.
• If hardware mounting to a surface other than drywall or wood, please consult with a professional about installation.

WARNING

• Intended for young children aged 6 months through 24 months
• To prevent serious injury or death, securely install gate or enclosure and use according to manufacturer’s instructions.
• Never use with a child able to climb over or dislodge the gate or enclosure.
• Never leave child unattended.
• Use only with the locking/latching mechanism securely engaged.
• To prevent falls, NEVER use at the top of stairs.
• Check the gate regularly to see if all the hardware and mountings are tightened.
Before Assembly

PLEASE CHECK TO MAKE SURE YOU HAVE THE FOLLOWING PARTS:

A Gate Frame (1)
B Wall Cups (4)
C Screws (4) (requires a Phillips/cross-head screwdriver)
D Threaded Spindle Rods (4)
NOTE: When installing any gate at its maximum width, use wall cups to ensure stability and safety.
Assembling and Installing Your Gate

**NOTE:** You will notice a slight gap between the gate door latch and the frame. **This is not a defect.** Your gate is a pressure mounted gate and this gap will disappear once you tighten your gate in its opening.

**STEP 1**
Locate the (4) threaded spindle rods. Rotate the adjustment wheels along the threading, eliminating the gap between the adjustment wheel and the rubber foot.

**STEP 2**
Insert the (4) threaded spindle rods into the holes at each of the four corners of the gate.
STEP 3

Position the gate so that it is level and centered within your doorway or opening. Rotate the \textit{adjustment wheels} on the \textit{threaded spindle rods} in the opposite direction as in STEP 1, expanding the gap between the \textit{rubber foot} and the \textit{adjustment wheel}. Expand each of the \textit{(4) threaded spindle rods} until they make contact with the doorway or opening. Do not fully tighten the \textit{threaded spindle rods} yet.

\textbf{NOTE:} It may be necessary to hold the \textit{threaded spindle rods} or \textit{rubber feet} while rotating the \textit{adjustment wheels} to ensure the entire unit does not rotate.
STEP 4

When you are satisfied with the general placement of your gate, fully tighten the *threaded spindle rods* attached to the lower corners of the gate by further rotating the *adjustment wheels*.

Continue by tightening the upper *threaded spindle rods*. As you tighten the *threaded spindle rods*, you will notice the gap between the *door frame* and the *easy slide latch* begin to narrow.

In order for the gate to function properly, stop tightening the upper *threaded spindle rods* just before the *outer housing* of the *easy slide latch* and the *receiving component* touch.

**NOTE:** There should be equal spacing among each of the (4) *threaded spindle rods*. Make the appropriate adjustment to ensure you have installed your gate safely.
Positioning and Attaching the Wall Cups

Your gate is a pressure mounted gate. Therefore, it is not necessary to use the screw attached wall cups in your door opening if you choose not to. However, if you are using the gate at the top of the stairs you must use the wall cups. Using the wall cups will affix your gate more firmly in the doorway or opening.

**STEP 1**

After you have mounted your gate, and you are satisfied with its positioning, draw a circle on the surface of your doorway or opening around the perimeter of the (4) rubber feet.

**STEP 2**

Next, completely remove the gate from the opening by loosening each of the (4) threaded spindle rods to depressurize the gate.
**STEP 3**

With the gate fully removed, you can now use the circles you marked during STEP 1 as guides for screwing in your (4) wall cups.

Center each of the wall cups within the guide circles and use the provided self-tapping screws to fasten them in place via the hole through the center of each wall cup.

**STEP 4**

Reinstall your gate in the doorway or opening according to the instructions, using the newly installed wall cups as anchoring points for the (4) threaded spindle rods.
Operating the Door Latch By Hand

**STEP 1**

Squeeze one or both of the *circular buttons* on the *easy slide latch* while simultaneously pulling back on one or both of the *locking slides*. These two actions combined will disengage the lock and allow the gate to open freely.

**STEP 2**

Push or pull to open the gate door. To close, simply push or pull the door back into its original position. The *easy slide latch* will re-engage automatically and lock the door into its closed position.

**NOTE:** If your *easy slide latch* is not properly engaging with the *receiving component*, ensure that your gate is level, mounted properly, and that you have not over-tightened the *threaded spindle rods*. 
Operating the Door Latch By Foot

**STEP 1**
Insert your foot into the *foot latch opening* located towards the bottom of the gate door, this will automatically disengage the *kick pedal lock*. Push downward firmly with your foot to release the doors locking mechanism from its locked position. Once released, push the gate door away from yourself as you remove your foot from the *foot latch opening*.

**STEP 2**
To close, simply push the door back into its original position with your hand or foot. The *easy slide latch* will re-engage automatically and lock the door into its closed position. There is no need to step downward on the gate to close it.

**NOTE:** If your *easy slide latch* is not properly engaging with the *receiving component*, ensure that your gate is level, mounted properly, and that you have not over-tightened the *threaded spindle rods*. 
Adding a Gate Extension

STEP 1
Choose the side of the gate to be extended and remove the top and bottom threaded spindle rods.

STEP 2
Assemble the gate and extension as illustrated. Reposition the gate and fit in accordance with the gate fitting instructions.

NOTE: It is preferable to install any extensions on the hinge side of the gate. If you have an application that requires additional extensions, please contact the manufacturer.
REMOVING YOUR GATE FROM THE WALL

To remove your gate from the wall, rotate the *adjustment wheels* on each of the *(4) threaded spindle rods* to depressurize the gate from its doorway or opening. Then, gently pull or push the gate free from its doorway or opening.

CARE AND MAINTENANCE

Periodically check the gate for signs of damage, wear, or missing components. Do not use if any part is missing, worn or damaged. Check the gate regularly to ensure all the hardware and mountings are tightened. Do not use abrasive cleaners or bleach. Clean by sponging with warm water and a mild detergent.

90 DAYS LIMITED WARRANTY

If, during the first 90 days after consumer purchase of the item, under reasonable and non-commercial use and conditions of maintenance, it fails while owned by the original purchaser because of the quality of materials or workmanship of finish and assembly, Regalo International, LLC, will replace or repair it at Regalo’s option. PROOF OF PURCHASE REQUIRED.
